EMPLOYMENT

Senior Software Engineer

Northrop Grumman

August 2022 - Present

I work on large, distributed systems that integrate software services with lab hardware and test infrastructure. My focus has been building automation frameworks and integration layers that make complex systems testable, observable, and repeatable.

- Designed an automated system-level test framework used to validate distributed software interacting with lab hardware.
- Built Python-based integration layers to standardize communication between lab systems and higher-level business software.
- Established containerized CI/CD workflows that introduced reproducible builds, automated regression testing, and consistent deployment practices.
- Developed internal tools for real-time lab monitoring and visualization, improving visibility into lab configurations and increasing traceability.
- Regularly serve as the point engineer for cross-team integration efforts where software boundaries are unclear or poorly defined.

Electronics Engineer

United States Air Force

July 2020 - July 2022

Worked on mission-critical F-16 subsystems and associated simulation environments. The role required deep systems understanding and hands-on debugging in environments where timing, resource allocation, and low-level behavior directly impacted system reliability.

- Sustained and enhanced software supporting flight and simulation subsystems
- Integrated cross-team software updates into simulator environments to maintain validation accuracy and regression stability.
- Supported operational readiness by balancing immediate fixes with long-term maintainability.

Systems Engineering Intern

Micron Technology

June 2018 - August 2018

- Debugged memory product failures on proprietary customer platforms
- Produced system-level failure analyses used by internal engineering teams

SKILLS

Programming Languages: Python, C++, C, TypeScript, JavaScript, Bash, PowerShell, SQL

Test Automation & QA: PyTest, Unittest, TestNG (conceptual), Selenium (conceptual), API testing, integration testing, system testing, regression testing, hardware-in-the-loop (HIL) testing, automated validation frameworks, test orchestration

CI/CD & DevOps: Git, GitHub, GitLab CI, CI/CD pipelines, Docker, containerized builds, automated deployments, build automation, artifact management, release engineering

Systems & Backend: REST APIs, microservices, service integration, HTTP/HTTPS, TCP/UDP, JSON serialization, IPC, multithreading, concurrency, real-time systems

Frontend: React, Node.js, Next.js

Data & Analysis: NumPy, Pandas, PyTorch, scikit-learn, data pipelines, automated result analysis

Databases: PostgreSQL, SQLite, relational databases, schema design

EDUCATION

M.S. Computer Science

Georgia Institute of Technology

Jan 2025 - Expected Dec 2027

B.S. Electrical Engineering

University of Idaho

Aug 2016 - May 2020

CERTIFICATIONS AND ACHIEVEMENTS

CompTIA Security+ (SY0-701)

Earned Oct 2025

Active Top Secret Clearance

Earned June 2023

SDS Innovation of the Year Top 10 Finalist

Earned 2025
