EDUCATION

Georgia Institute of Technology

Master of Science in Computer Science

Specialization: Artificial Intelligence

Online

Expected Summer 2027

University of Idaho

Bachelor of Science in Electrical Engineering

Moscow, Idaho

Aug 2016 - May 2020

PROFESSIONAL EXPERIENCE

Northrop Grumman

Senior Software Engineer

Roy, Utah

August 2022 – Present

- Developed Python-based automation frameworks, API clients, and hardware device drivers for integrating and verifying complex defense systems.
- Served as a primary developer for the WIM application, delivering REST APIs, PostgreSQL-backed services, and a React-based interactive lab interface.
- Led backend development for an automated testing framework, reducing targeted test cycles from roughly three weeks to under an hour while supporting modular drivers and more than 50 concurrent test sessions.

United States Air Force

Electronics Engineer

Hill AFB, Utah

July 2020 – July 2022

- Developed and maintained software for Air Force simulation and training systems, implementing pilot-requested features and subsystem updates.
- Diagnosed integration issues and delivered targeted fixes in complex simulation environments, including debugging and rapid hotfix support.
- Improved development efficiency by automating software builds, testing, and integration workflows for multiple simulator platforms.

SKILLS

- Backend and API Development: Python, FastAPI, Flask, REST APIs, PostgreSQL, SQLAlchemy, asyncio
- Test and Lab Automation: pytest, unittest, Hardware-in-the-Loop (HIL) Testing, Test Automation, Test Procedure Automation, Concurrent Test Execution, Equipment Control
- Hardware and Instrumentation Integration: RS-232, TCP/IP, USB, SCPI, Serial Communications
- Frontend and Engineering Interfaces: React, TypeScript, JavaScript, Interactive Lab Mapping, Data Visualization
- DevOps and Software Delivery: Docker, Git, GitLab CI/CD, Azure DevOps, Linux, Ansible

PERSONAL PROJECTS

HOMELAB INFRASTRUCTURE

- Self-hosted containerized services using Proxmox, secure remote access, DNS filtering, and automated backups. 100% satisfaction rate from 1 user (my spouse)

TELESCOPE CONTROL BRIDGE

- Developed a Python-based telescope control bridge integrating Stellarium with an Orion XX14G through network and serial control interfaces, enabling remote GoTo commands and object tracking.

CERTIFICATIONS & ACHIEVEMENTS

CompTIA Security+, SY0-701

Earned Oct 2025

SDS Innovation of the Year Top 5 Finalist

Earned June 2023

Active Top Secret Security Clearance

Granted 2025
